

(based on joint work with Faruk Akkuş)

| **STATE OF THE ART:** The potential of Q1 and Q2 has been long recognized, but not fully exploited. (important prior work includes Alexiadou 2014; Baker 2022; Bruening 2006; Chierchia 2004; Dimitriadis 2008; Dimitriadis & Everaert 2014; Jo 2019; Kastner 2017; Kobayashi 2020; Lidz 1996; 2001a; b; Marantz 1984; McGinnis 2022; Papangeli 2004; Pesetsky 1995; Reinhart & Reuland 1993; Reinhart & Siloni 2004; 2005; Reuland 2018; Siloni 2012; Spathas et al. 2015; Sportiche 2022; Tsimpli 1989)

— This is in part because the questions themselves have proven to be recalcitrant on two fronts:

1. **Diagnostic difficulties:** (Alexiadou & Schäfer 2014; Dimitriadis & Everaert 2014; Haiden 2019)

- Many standard, cross-linguistically stable tests of argument positioning are *thematically grounded*: they test for e.g. the presence of agentivity.
- Applied to verbal reflexives, they tell us nothing we didn't already know.

2. **Architectural priors:**

- These are inevitably superimposed on, and thus artificially limit, the range of answers to Q1 and Q2 that we are willing to consider.
- But we can keep Q1/Q2 separate from yet another question Q3:

(Q3) *Locus question*

Where in the grammar are verbal reflexives built?

| **TODAY:** Lessons from Turkish verbal reflexives (TVRs) (Akkuş & Paparounas to appear).

- This is a language whose verbal reflexives are underinvestigated (but see Key 2021a; b; to appear)...
- ...and which has a cluster of *positional* argument placement diagnostics that we can leverage.

THE TALK IN A NUTSHELL

(9) Outline of the analysis

(8) *Case study: TVRs*

Leyla yıka-n-dı.
Leyla.NOM wash-**NACT**-PST
'Leyla washed herself.'

1. **Q1, Intransitivity/Monadicity:** The subject is the sole argument.
2. **Q2, Low origin:** TVRs look like passives because they have a basic passive syntax: the surface subject is a deep object.
3. **Q2, VoiceP-internal movement:** The subject raises to the specifier of a reflexivizing Voice head, deriving the reflexive reading.
4. **Upshots on Q3:** Results unexpected under lexical word-formation.

2 BACKGROUND

| VOICE MORPHOLOGY: Turkish verbs mark certain voice distinctions morphologically.

- All active transitives are realized with unmarked ‘active’ voice morphology (10)
- Nonactive morphology is **syncretic**, e.g. in both passives and many unaccusatives (11)
(e.g. Bahrt 2021; Embick 1997; 1998; Haspelmath 1990; Kemmer 1993; Oikonomou & Alexiadou 2022; Paparounas 2023)

- | | |
|--|--|
| <p>(10) Leyla kapı-yı aç-tı.
Leyla.NOM door-ACC open-PST
‘Leyla opened the door.’ (transitive)</p> | <p>(11) Kapı aç-ıl-dı.
door.NOM open NACT PST
✓‘The door opened.’ (unaccusative)
✓‘The door was opened’ (passive)</p> |
|--|--|

| ENTER VERBAL REFLEXIVES, which go hand-in-hand with **NACT**:

(Embick 2004; Geniušienė 1987; Paparounas 2023; Spathas et al. 2015; Wood 2014)

- | | |
|---|--|
| <p>(12) Leyla soğuk su-yla yıka- n- dı.
Leyla.NOM cold water-with wash NACT PST
✓‘Leyla was washed with cold water’
✓‘Leyla washed herself with cold water’</p> | <p style="text-align: right;">(passive)
(reflexive)</p> |
| <p>(13) Leyla soğuk su-yla yıka- dı.
Leyla.NOM cold water-with wash PST
?‘Leyla washed [salient object of washing] with cold water’
✗‘Leyla was washed with cold water’
✗‘Leyla washed herself with cold water’</p> | <p style="text-align: right;">(transitive)
(passive)
(reflexive)</p> |

- Pronominal reflexives always involve a transitive verb in the ‘active’:

- | | |
|--|--|
| <p>(14) Leyla kendi-ni soğuk su-yla yıka- (*n-) dı.
Leyla.NOM self-ACC cold water-with wash NACT PST
‘Leyla washed herself with cold water.’</p> | <p style="text-align: right;">(transitive with pronominal reflexive)</p> |
|--|--|

| ROOT-SPECIFICITY: Not every Root in the language can form a verbal reflexive, e.g.:

- | | |
|---|---|
| <p>(15) Leyla suçla- n- dı.
Leyla.NOM blame NACT PST
✓‘Leyla was blamed’
✗‘Leyla blamed herself’</p> | <p style="text-align: right;">(passive)
(reflexive)</p> |
|---|---|

- Common assumption: The set of Roots that can form verbal reflexives is
 - small in cardinality; and
 - circumscribed to those Roots that describe prototypically self-oriented eventualities
(for Turkish, see Kornfilt 1997: p. 140; and cf. Embick 2004; Geniušienė 1987; Reuland 2018)
- Both are incorrect, at least for Turkish (see Akkuş & Paparounas to appear); and verbal reflexives are thus no different to other kinds of voice (see e.g. Alexiadou & Doron 2012).

MONADICITY/INTRANSITIVITY DIAGNOSTICS

The crux: striking contrasts between verbal and pronominal reflexives.

(see Reuland 2018 for recent summary of some standard diagnostics; cf. Abusch 1989; Dimitriadis & Everaert 2014; Jackendoff 1992; Labelle 2008; Lidz 2001a; Marelj & Reuland 2016; Reinhart & Reuland 1993; Reinhart & Siloni 2004; 2005; Reuland 2001; Reuland & Winter 2009; Safir 2004; Sells et al. 1987; Zec 1985)

	Pronominal reflexive	Verbal reflexive
Causee case	DAT	ACC
<i>only</i>	bound and free	only bound
VP ellipsis/VP anaphora	strict and sloppy	only sloppy
Comparative ellipsis	three readings	one reading
<i>De re</i> readings	✓	✗
Proxy readings	✓	✗

- Some diagnostics are syntactic, others interpretive.
- Both types consistently pick out the verbal reflexive as distinct from transitive verbs with a pronominal reflexive object...
- ...a result mysterious if the verbal reflexive is a transitive verb in disguise.

| INDIRECT CAUSATIVES in Turkish (e.g. Akkuş 2021a; Zimmer 1976) show a Case alternation on the Causee, conditioned by the transitivity of the causativized base.

- Causativized **transitives** have DAT causees:

- (16) a. Bütün misafir-ler araba-yı temizle-di-ler.
all guest-PL car-ACC clean-PST-3PL
‘All the guests cleaned the car.’
- b. Ali bütün { *misafir-ler-e* / **misafir-ler-i* } araba-yı temizle-t-ti.
Ali all guest-PL-DAT guest-PL-ACC car-ACC clean-CAUS-PST
‘Ali made all the guests clean the car.’

- Causativized **intransitives** (specifically unergatives) have ACC causees:

- (17) a. Sporcu koş-tu.
athlete run-PST
‘The athlete ran.’
- b. Antrenör { *sporcu-yu* / **sporcu-ya* } koş-tur-du.
trainer athlete-ACC athlete-DAT run-CAUS-PST
‘The trainer made the athlete run.’

- Verbal reflexives always pattern with the intransitives:

(cf. Kayne 1975: ch.5)

- (18) a. (ben) bu ara berbat besle-n-iyor-um.
I.NOM this while terrible feed-**NACT**-PROG-1SG
'I feed myself terribly these days.'
- b. Merve { *ben-i* / **ban-a* } bu ara berbat besle-n-dir-iyor.
Merve I-ACC I-DAT this while terrible feed-**NACT**-CAUS-PROG
'Merve is making me feed myself terribly these days.'

— Compare verbs with pronominal reflexive objects, which are clearly transitive:

- (19) a. Çocuk kendi-ni besle-di.
child self-ACC feed-PST
'The child fed itself.'
- b. Ebeveynler-i { *çocuğ-a* / **çocuğ-u* } kendi-ni besle-t-ti.
parents-POSS child-DAT child-ACC self-ACC feed-CAUS-PST
'The parents made the child feed itself.'

THE ARGUMENT

- The DAT/ACC alternation on the Causee tracks the transitivity of the causativized base.
- (18b) is accordingly incompatible with transitive analyses of Turkish verbal reflexives.¹
 - NB this is as syntactic as a transitivity test can get!

4 INTERNAL ARGUMENTHOOD DIAGNOSTICS

LOW ORIGIN DIAGNOSTICS

	Transitive (subj)	Unergative	Transitive (obj.)	Unaccusative/passive	Verbal reflexive
Resultatives	✗	✗	✓	✓	✓
Stative participles	✗	✗	✓	✓	✓
Restitutive <i>again</i>	✗	✗	✓	✓	✓

- Reflexive verbs pattern with unaccusatives/passives, and not with unergatives.
- Where they pattern with transitive structures, their surface subject patterns with the internal, not external, argument of those structures.

| ADJECTIVAL RESULTATIVE SECONDARY PREDICATES: A robust test for deep objecthood (Levin & Rappaport Hovav 1995; Simpson 1983)

¹Note that we cannot explain (18b) away by taking the purported null anaphoric argument to be somehow deficient, and thus invisible for Case assignment/competition: Turkish transitives with pseudo-incorporated (or clausal) objects pattern with transitives, not intransitives, for Causee Case (Akkuş 2021a: pp. 272–273).

- (20) *Turkish resultatives track deep objects* (Turgay 2013)
- a. Leyla masa-yı (ter-temiz) sil-di.
Leyla table-ACC REDUP-clean wipe-PST
'Leyla wiped the table (completely clean).' (Turgay 2013:(27a)) *transitive*
 - b. Masa (Leyla tarafından) ter-temiz sil-in-di.
table (Leyla by) REDUP-clean wipe-**NACT**-PST
'The table was wiped completely clean (by Leyla).' *passive*
 - c. Nehir kas-katı don-du.
river REDUP-solid freeze-PST
'The river froze solid.' (Turgay 2013: p. 112) *unaccusative*
 - d. *Ceren yop-yorgun koş-tu.
Ceren REDUP-tired run-PST
'Ceren ran tired.' (based on Turgay 2013: p. 69) *unergative (predicate OK as depictive)*
- (21) *No unselected objects*
- *Leyla demliĝ-i boş iç-ti.
Leyla teapot-ACC empty drink-PST
Intended: 'Leyla drank the teapot empty.' (Turgay 2013: p. 89)
- (22) *No resultatives of missing objects*
- a. Q: Ne ol-du?
what happen-PST
'What happened?'
 - b. A: Leyla *(masa-yı) ter-temiz sil-di.
Leyla table-ACC REDUP-clean wipe-PST
'Leyla wiped *(the table) completely clean.'
- (23) *Resultative of pro-dropped objects*
- a. Q: Leyla masa-ya ne yap-tı?
Leyla table-DAT what do-PST
'What did Leyla do to the table?'
 - b. A: Sadece *pro*_{obj} ter-temiz sil-di.
only REDUP-clean wipe-PST
'She just wiped it completely clean.'

| CRUCIALLY, resultatives combine with verbal reflexives perfectly easily:

- (24) Ter-temiz yıka-n-dı-m.
REDUP-clean wash-**NACT**-PST-1SG
'I washed myself clean.'
- (25) Kendi-m-i ter-temiz yıka-dı-m.
self-1SG.POSS-ACC REDUP-clean wash-PST-1SG
'I washed myself clean.'
- (26) "...Bir sürü Himba insanı görebiliyorsunuz, özellikleri ... (you can see a number of Himba folks, their distinctive feature is ...)"
kıp-kırmızı-ya boya-n-mış ol-ma-lar-ı.
REDUP-red-DAT paint-**NACT**-PTCP be-INF-PL-POSS
'that they are self-painted completely red.' <https://tinyurl.com/5yea9vcn>, 15:45.

INTERIM SUMMARY

(27) *The structure so far*

1. **Low origin:** The surface subject originates low – whence e.g. resultatives.
2. **Intransitivity:** Voice bears $[-D]$ – an instruction not to Externally Merge a DP
 - This is the same feature borne by Voice in passives and unaccusatives...
 - ...that conditions the insertion of non-active morphology (Paparounas 2023: ch. 2)
3. **Grammatical subjecthood:** EPP-driven movement to spec, TP places the object in grammatical subject position.

Now, for one last refinement...

5 EXTERNAL ARGUMENTHOOD DIAGNOSTICS

| A STRIKING OBSERVATION: The surface subject of TVRs has external argument properties as well.

EXTERNAL ARGUMENTHOOD DIAGNOSTICS

	Unaccusative/passive	Transitive	Unergative	Verbal reflexive
Episodic impersonals	✗	✓	✓	✓
Agent nominals	✗	✓	✓	✓
Indirect causatives	✗	✓	✓	✓
Voice matching under -ArAk gerundive	reflexive only matches transitives/unergatives			
Long object movement	no LOM with reflexive (vs. passive)			

- For these tests, the surface subject of TVRs patterns with that of unergatives and transitives.

| EPISODIC IMPERSONALS: A diagnostic sensitive to the presence of a filled spec, VoiceP. (see Akkuş 2021a; Dikmen et al. 2022; Legate et al. 2020; Nakipoglu-Demiralp 2002 and references therein)

- **Unergatives** form impersonals in both habitual and episodic aspects:

- (28) a. Her gece dans ed-il-ir.
every night dance do-IMPERS-AOR
'People/one dance(s) every night.' ✓habitual impersonal
- b. Dün gece dans ed-il-di.
yesterday night dance do-IMPERS-PST
'People/one danced last night.' ✓episodic impersonal

- **Transitives** behave on a par with unergatives in this respect:

- (29) a. Otobüs-e bin-**il**-ir.
 bus-DAT board-IMPERS-AOR
 ‘People/one boards the bus.’ ✓*habitual impersonal*
- b. Dün otobüs-e bin-**il**-di.
 yesterday bus-DAT board-IMPERS-PST
 ‘People/one boarded the bus yesterday.’ ✓*episodic impersonal*

— But **unaccusatives** only license habitual impersonals, never episodic ones:

- (30) a. Türkiye-de her gün trafik kaza-lar-ı-nda öl-**ün**-ür.
 Turkey-LOC every day traffic accident-PL-CM-LOC die-IMPERS-AOR
 ‘In Turkey people/one dies in traffic accidents every day.’ ✓*habitual impersonal*
 (Nakipoglu-Demiralp 2002: p. 140)
- b. *Dün burada öl-**ün**-dü.
 yesterday here die-IMPERS-PST
 Intended: ‘People/one died here yesterday.’ ✗*episodic impersonal*

— **Passives** behave like unaccusatives: no episodic impersonals of passives (Akkuş 2021a; Legate et al. 2020).

- (31) a. Harp-te vur-ul-**un**-ur.
 war-LOC shoot-NACT-IMPERS-AOR
 ‘One is shot (by one) in the war.’ (Özkaragöz 1986: p. 77) ✓*habitual impersonal*
- b. *Harp-te vur-ul-**un**-du.
 war-LOC shoot-NACT-IMPERS-PST
 ‘One was shot (by one) in the war.’ (cf. Dikmen et al. 2022: (50b)) ✗*episodic impersonal*

| **OBSERVATION:** Episodic impersonals are only possible with structures that have a filled spec, VoiceP.

- **Verbal reflexives** initially have an empty spec, VoiceP.
- If this position remains empty, they should not license episodic impersonals.
- And yet they freely do, thereby patterning with unergatives/transitives:

- (32) a. Dün bu nehir-de yıka-n-**ıl**-mış.
 yesterday this river-LOC wash-NACT-IMPERS-PST
 ‘Yesterday people/one washed in this river.’ ✓*episodic impersonal*
- b. Misafir-ler-in göz-ü ön-ün-de giy-in-**il**-di, süsle-n-**il**-di.
 guest-PL-GEN eye-POSS front-POSS-LOC dress.up-NACT-IMPERS-PST doll.up-NACT-IMPERS-PST
 ‘People/one dressed up/dolled up in front of the guests.’ ✓*episodic impersonal*

A NEW OBSERVATION: MOVEMENT

- We previously diagnosed the surface subject of TVRs as originating within the VP, thus patterning with the surface subject of passives and unaccusatives.
- Yet it turns out to also pass *external* argument diagnostics – patterning *unlike* passives and unaccusatives for the relevant tests.

| COHERENCE CHECK: The same argument passes external and internal argumenthood diagnostics *in the same example*; what we’re detecting is not a case of structural ambiguity (cp. Romance in McGinnis 2022).

- For example, episodic impersonal + resultative:

- (33) Dün bu nehir-de ter-temiz yıka-n-ıl-dı.
 yesterday this river-LOC REDUP-clean wash-**NACT**-IMPERS-PST
 ‘People/one washed (themselves) clean in this river yesterday.’

6 ANALYSIS AND UPSHOTS

6.1 Implementing and interpreting movement

| STEP 1: Syntactic movement to the intermediate landing site.

- [$\langle \pm D \rangle$] on a given head governs *Internal Merge* of a DP to the specifier of that head (see Hewett 2023 for extensive recent defense, albeit from A’ phenomena; cf. e.g. Abels 2012; Deal 2023; Georgi 2017).
- The locus of the movement feature is Voice_{REFL}, selected by the relevant verbs. (for reflexive Voice without movement see Alexiadou 2014; Kallulli & Roberts 2025; Labelle 2008; Oikonomou & Alexiadou 2022; Paparounas 2023; Raghotham 2022; Spathas et al. 2015; for pronominal reflexives see Ahn 2015, cf. Baker 2022; Kratzer 2009; Murphy & Meyase 2019; Paparounas & Akkuş 2023)

- (34) Leyla yıka-n-dı.
 Leyla.NOM wash-**NACT**-PST
 ‘Leyla washed (herself).’

- (35) A-movement

| STEP 2: Specifying the interpretation of Voice_{REFL}.

- That we find a step of movement towards spec, VoiceP in verbal reflexives – and not in passives and unaccusatives – is very likely not an accident.
- Proposal: Voice_{REFL} and movement work together to effect the identification that yields a verbal reflexive.
- Implementation: a free variable n introduced by Voice_{REFL} (cf. Akkuş 2021b)

(36) *Interpretation: ‘Pre’-movement*

- n is bound via movement:² raising of the internal argument yields a λ -abstract that binds both the trace and the free variable.

(37) *Interpretation: ‘Post’-movement*

(See Hornstein 2001 for a related view of reflexivization. Kastner (2017) advances a similar analysis for Hebrew, but without explicit evidence for movement and on the basis of a non-standard view of how movement is in-

²In fact, it must be stipulated that n can only be bound via movement: if the possibility of coreference were left open, we would mispredict the existence of sloppy readings here. Altshuler et al. (2019) presents one concrete way of separating indices into discourse-related and trace-related that may be of relevance; cf. the BIER of Buring (2005)

terpreted. Many analyses take movement to be crucial but only consider movement to the grammatical subject position; see e.g. Spathas et al. 2015.)

- *n* is neither syntactically projected nor bound by an abstract distinct from that of the internal argument. Instead, its presence, coupled with movement, has the effect of reflexivizing the Agent role.

6.2 *Revisiting homomorphism and biuniqueness*

- (38) HOMOMORPHISM: The *initial* syntactic position of arguments predicts their thematic role.
- (39) BIUNIQUENESS: The mapping between thematic roles and argument positions is one-to-one.
 - The Turkish results reinforce HOMOMORPHISM: it cannot be an accident that we find movement between internal and external argument positions just with those verbs whose subject is read as both an Agent and a Theme.
 - They also call for a relaxation of BIUNIQUENESS, *pace* recent invocations of such principles (Collins 2024).
 - One upshot of BIUNIQUENESS-enforcing principles is the so-called ban on movement to theta positions.
 - But the theory advanced here doesn't have classical theta positions to begin with: thematic roles are functions at LF, not syntactic entities.
 - Thus nothing guarantees that a given functional head has to introduce *both* a thematic function *and* a nominal whose extension will come to saturate that function.
 - This view of thematic roles (Alexiadou et al. 2015; Heim & Kratzer 1998; Marantz 2013; Pytkäinen 2008) thus predicts mismatches between these two dimensions;
 - and such mismatches have already been argued to exist (e.g. Bruening 2013; Legate 2014; Legate et al. 2020; Myler 2016; Wood 2015).
 - Verbal reflexives are simply another type of mismatch.

6.3 *The locus of reflexivization: A new argument for the role of syntax*

- (Q3) *Locus question*
Where in the grammar are verbal reflexives built?

| THREE CLASSES OF ANSWERS to Q3:

1. **Only in the lexicon:** a lexical rule bundles thematic roles presyntactically (e.g. Bouchard 1982; Bresnan 1982; Grimshaw 1982; Wehrli 1986)
2. **Only in the syntax (or later):** thematic role identification is effected in the syntax via movement of one sort or another (Hornstein 2001; Kastner 2017; Spathas et al. 2015), or after the syntax, via delayed saturation (Wood 2014; 2015) or a (stipulated) identificational semantics on Voice (Oikonomou & Alexiadou 2022; Paparounas 2023)
3. **In the lexicon or the syntax:** lexical and syntactic routes to reflexivization co-exist as a parametric option (Reinhart & Siloni 2004; 2005; see Marelj & Reuland 2016 for a revisionist view and cp. Embick 2004)

| EMPIRICAL ARGUMENTS for or against each view are not always easy to mount – especially in the case of view 3.

- View 3 nonetheless typically takes languages like Turkish to instantiate the lexical route...
- ...in part because the ‘lexical restrictedness’ of verbal reflexives in such languages is taken to be a hallmark of lexical word-formation.

| SCHEMATIZING A LEXICAL ACCOUNT:

- First, posit pre-syntactic bundling of theta roles, presumably triggered by affixation of the relevant morpheme to a Root:

(40) *Bundling à la Reinhart & Siloni 2005: General schema*
$$\text{VERB}(\underline{\text{AGENT}}, \underline{\text{THEME}}) \xrightarrow{\text{Bundling}} \text{VERB}(\underline{\text{AGENT} + \text{THEME}})$$

- Second, assign the theta role to a syntactic argument.³

| THE ISSUE: Why move?

- If theta-role identification has taken place pre-syntactically...
- ...then why does the syntax move an argument that has already received a composite role in its base position to an entirely different position (one canonically associated with one half of the composite role...)
- ...and why does it do so only for arguments of reflexive verbs?

7 CONCLUSION: CONSEQUENCES, QUESTIONS, PREDICTIONS

| BROAD POINT: Turkish suggests that phrasal movement – a *bona fide* narrow-syntactic operation – is a possible route to reflexivization in natural language.

- This is an empirical argument – arrived at by considering Q1-Q3 for a single language.

(Q1) *Arity question*

What is the {transitivity of the verb / valence of the predicate} in verbal reflexives?

(Q2) *Position question*

What is the derivational history of the surface subject of verbal reflexives?

(Q3) *Locus question*

Where in the grammar are verbal reflexives built?

- Inevitably, we must ask a meta-question:

(Q4) *Generality question*

To what extent do the answers to Q1–Q3 stay constant across languages?

Some first thoughts follow.

³Reinhart & Siloni (2004) stipulate for reasons internal to the framework of Reinhart (2016) that the composite role can universally only be assigned to external arguments. Languages with passive-like reflexives are incompatible with this view (Embick 2004; Kastner 2017; Spathas et al. 2015), and Turkish is among them.

7.1 Movement for all reflexives?

The account evidently vindicates movement-based approaches to construal (Drummond et al. 2011; Hornstein 1999; 2001) – but only partially.

- It is a stated ambition of these proposals to derive *all* reflexive interpretations via movement.
E.g.:

(41) [John] shaved [himself] .
 ↑ ↓

- But assigning the same derivation to verbal and pronominal reflexives (in Turkish and beyond) would leave the many differences between them unexplained.
- This on top of many independent problems with (41), many familiar from parallel critiques of movement-based approaches to control (Bobaljik & Landau 2009; Landau 2003; Sigurðsson 2008; Wood 2012).
- A sensible conclusion is that some, but not all, reflexive dependencies are movement-derived, again paralleling arguments from control (Grano 2015; Martinović 2024).

7.2 Movement for all verbal reflexives?

| A POSSIBILITY: Perhaps movement is part-and-parcel of what it means to be a *verbal* reflexive.

- The answer depends in part on what we mean by ‘verbal reflexive’... (cf. Legate 2021 on ‘passives’);
- but obvious problems aren’t hard to find.
- E.g., for English, much depends on evidence for low origin of the surface subject in the first place, e.g. the status of (42):

(42) John shaved smooth / washed clean /

- That being said, here are some ways of testing the broader applicability of the analysis.

7.3 Predictions

| PREDICTIONS FROM MOVEMENT: If reflexivization is driven by (A-)movement, then it should be subject to the same constraints as A-movement. At least two specific predictions:

(P1) *A-(im)mobility predicts (non-)reflexivizability*

If you can(’t) A-move, you can(’t) be identified with the Agent, all things being equal.

- *Ask me about defectively intervening datives!*

(P2) *A-locality constrains reflexivization*

Given two arguments c-commanded by Voice_{REFL}, only the most A-local one can be identified with the Agent.

- *Ask me about Turkish transitive locational reflexives!*

(P3) *Agent-orientedness*

If a verbal reflexive involves Voice_{REFL}, then reflexivization is obligatorily agent-oriented.

- Indeed, it is exceedingly common for verbal reflexives to be agent-oriented cross-linguistically (Reuland 2018).
- E.g. experiencer predicates typically don't form good verbal reflexives (see e.g. Alexiadou 2014; Paparounas 2023; Raghotham 2022)

(P4) *Origin of reflexivity*

If a verbal reflexive involves Voice_{REFL}, then reflexivity originates outside the VP.

- *Ask me about Turkish tekrar 'again', and possible Turkish-Greek differences!*
